

Cannon Project Details

Nap of the Americas; Miami, Florida, USA

The Nap of the Americas is a tier one network access point, serving Southern USA and Latin America.

Cannon Technologies Ltd won a competitive tender against all major US enclosure producers to supply 25,000 enclosures to the project, 5,000 enclosures for each of five floors, comprising enclosures accommodating multi-vendor servers, etc. The project was won by virtue of the technical design advantages offered by the Cannon Smart Cab solution, at an economical price.

The enclosures were mostly co-locate.

Cannon Quick Fit design allows for cell and door heights to be changed at will to accommodate differing business demands, so that varying amounts of any cabinet can be rented with minimal change. All doors were of maxi-vent design. Unusually, a high percentage of enclosures were 62U high to gain maximum income from available real estate. Other enclosures were 47U high.

Enclosures were manufactured in the Cannon UK factory, shipped and assembled at site. Cannon resilient dual AC switches were also installed, as were Cannon high security cages for some areas.

Cannon were proud to have won this prestigious project, which was the largest single enclosure project in the USA.
